Injectors & Seal Rings S60 Set of 6 Powerpack

Replacing fewer than six fuel injectors at one time isn't smart for your business. Here's why:

- Injectors wear at the same rate—if one needs replacing, the others are probably not far behind.
- Once your rocker cover is removed, all six injectors are immediately accessible—so you can save the labor costs of replacing injectors individually.
- Your truck is already in our service bay, so there is no need to take it off the road again for the same service event.
- PowerPacks fuel-injector sets are priced at a discount compared to buying individual injectors—another way PowerPacks save you money.
- Unlike non-genuine replacement fuel injectors which are merely rebuilt, every Detroit® fuel injector is completely remanufactured.

Turbos Series 60

Turbochargers are extremely complex assemblies that are vital to engine performance, fuel economy, and emissions compliance. With internal components rotating at speeds up to 120,000 RPM they are also safety critical. Detroit Reman combines 30 years of experience along with OEM expertise to provide a high quality Turbocharger that can be trusted to restore power at a lower cost

Fixed Price Tune-Ups S60 & DD15

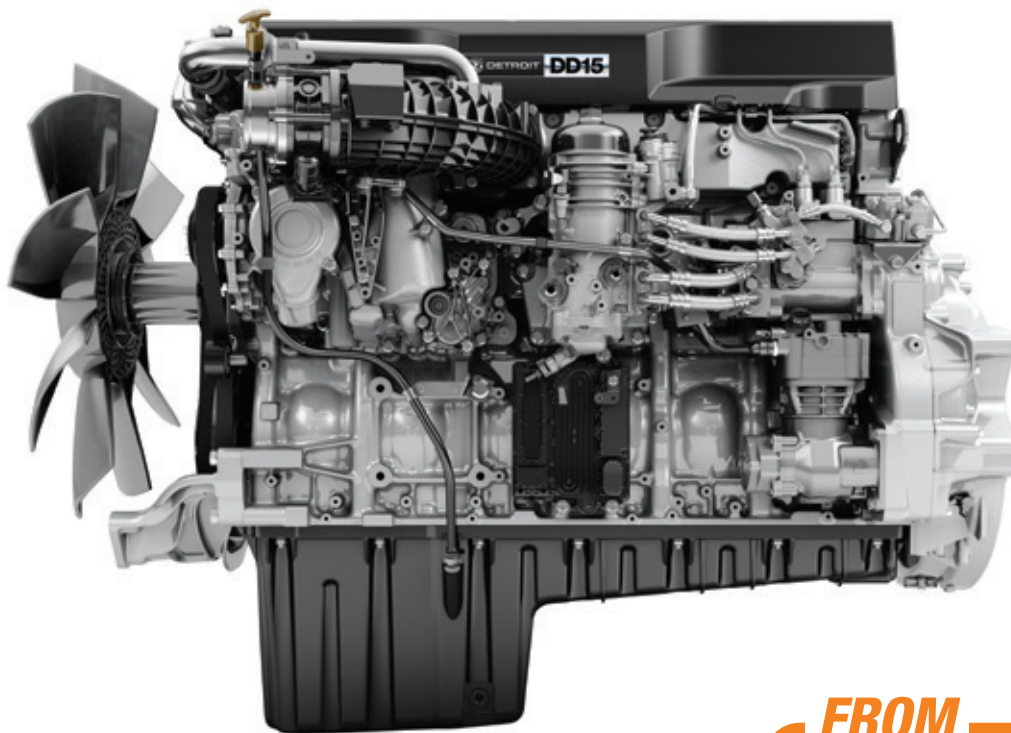

88DED15001042

DD15 Engine Tune-Up Includes:

- Adjust valve and Jacobs clear
- DDEC report download
- Fault code check and clear
- HP fuel line inspection

Series 60 EGR Tune-Up Includes:

- Remove Jake brake heads
- Inspect injector harness
- Check Jake brake terminals
- Perform tune-up procedures, set heights and clearances
- Download DDEC report and check fault codes
- Check turbocharger wastegate operation
- Test charge air cooler system (CAC)
- Check air filters as per manufacturer specifications

Detroit DD15 Change Out High Pressure Pump

One of the central attributes of the DD15 is clean and efficient fuel combustion. This is based on the electronically-controlled Amplified Common Rail Fuel System (ACRS). The ACRS controls the entire injection sequence at any operating point. As the highest pressure is only generated in the injectors, the injection processes are extremely stable. This results in quiet, refined operation with low fuel consumption and reduced emissions.

If your engine is hard to start or suffering poor performance due to slow pressure build up in your fuel system, it might be time to replace the high pressure fuel pump.

DETROIT™

Detroit DD15 New Engine

Detroit engines perform at their peak for kilometre after kilometre, with best-in-class fuel economy, low-cost maintenance and service. Every step of our design, testing and manufacturing process builds quality into every engine that bears the Detroit name. The focus of Detroit engineers is to achieve the most effective combination of performance and fuel economy. Their goal is to design and build engines that enable customers to operate their fleets more efficiently and ultimately to provide a lower cost of ownership. That's why the DD15 engine continues to evolve. Our engine technology and enhancements offer an unprecedented level of efficiency. Purchase a new Detroit DD15 today and take advantage of our national two year unlimited kilometre warranty*. Ask your local Detroit dealer for a complete installed price.

Penske Remanufactured DD15

The level of quality is perhaps the most significant difference between the remanufactured and rebuilt engine. All components of a remanufactured engine are inspected and surveyed. Depending on condition, they are either remanufactured to meet original specifications, replaced with only genuine Detroit components or reused if the part will perform as new with regards to performance and life expectancy. Once assembled, every DD15 remanufactured engine is tested on factory-specified dynamometers, using new engine performance parameters. This stringent validation process is not available to any other remanufacturer or rebuilder.

National 12 month unlimited km warranty** through Detroit Dealers.

**Warranty does not include vehicle towing expense, travel time, mileage travelled and other similar costs and expenses.

Available only as installed and only through a Detroit Dealer Service Department workshop.

DD15 3/4 Remanufactured engine

The perfect solution in a range of circumstances, this 3/4 DD15 engine package is beneficial for customers with non-functioning crankshafts, delivering time and cost savings through the replacement of the existing engine block with a 3/4 DD15 engine. In addition to being an economically favourable solution, the 3/4 DD15 engine package delivers the complete internal gear train and ease of installation with flywheel and flywheel housing being an exact match ensuring seamless bolting of engine to transmission.

Detroit's Proprietary Turbocharger is a huge contributing factor to the overall reliability, durability, and performance of the engine. The turbocharger is optimally matched to the exhaust gas recirculation (EGR) system for significant improvements in real-world fuel economy, without sacrificing any of the performance you've come to expect from the DD15. The DD15 turbo design has been streamlined for reduced weight and even greater efficiency and reliability.

When was the last time you changed out your turbocharger?

(Replacement of previous model DD15 turbo may attract additional charges)

DD15 Head Repair and Replace

Powerful, responsive engines with excellent fuel efficiency and performance, and quiet and smooth running characteristics are a necessity in today's industry. The DD15 cylinder head meets these needs with its robust construction, and high-grade technology with four valves per cylinder and two overhead camshafts. The cast iron single cylinder head is connected to the crankcase with a total of 38 bolts, further ensuring rigidity and stability.

If your engine is requiring more regular tune ups, you are experiencing a reduction in fuel economy, or you may even have blue smoke on start-up, chances are you could have worn valves and need to have your cylinder head replaced.
